

AI Usage DISCLOSURE FORM

1. Team Details

Team Name: Team Pulse

Product Name: Pulse :

Institution: RV College of Engineering

Submission Date: 2026-05-08

2. AI Usage Declaration

Did your team use any Artificial Intelligence (AI) in developing this project? Yes

3. Purpose of AI Usage

- **Idea generation / brainstorming:** Used LLMs to explore alternative implementations of the ReAct pattern and validate the "Railway Oriented Pipeline" against established functional programming standards.
- **Code generation or assistance:** Accelerated the development of boilerplate for the Python Multi-Agent orchestrator and GO to SQLite mapping.
- **UI / UX design:** Prototyped the initial CSS layout for the Web Audit UI; final refinement and interaction logic were manually tuned.
- **Content creation:** Summarizing technical logs for the final README and documentation.
- **Data analysis:** Identifying patterns in shell command execution logs during testing.
- **Testing / debugging:** Generating fuzzing inputs for the shell AST parser to ensure robustness against malicious payloads.

4. Feature Origin Classification

1. Feature Name: Multi Model Orchestrator

- Classification: Both
- Description: While AI assisted with the ReAct loop structure, the Core Orchestration Logic including model specific token optimization, session state isolation, and the tool calling boundary was manually engineered to ensure deterministic behaviour in production.

2. Feature Name: Ghost Sandbox Execution

- Classification: Self-Generated (AI Assisted)
- Description: AI was used for Docker API reference lookups. However, the Security Hardening (network egress fencing, filesystem overlay synchronization, and resource quota enforcement) was 100% human-engineered to prevent container escapes and side-channel attacks.

3. Feature Name: Railway-Oriented Pipeline

- Classification: Self-Generated
- Description: The architecture is a Human-Led Design. Implementing an immutable context-passing pipeline in Go required manual management of pointer safety and functional state transitions that current AI models struggle to maintain across a large codebase. AI was strictly limited to writing unit test cases for the pipeline.

5. Ethical & Compliance Confirmation

AI usage complies with guidelines and policies. **Yes**

No proprietary or copyrighted data misused. **I Agree**

6. Declaration & Sign-Off

Name of Team Representative: Dilraj Singh

Role: Team Representative

Signature: 

Date: 2026-05-08
